

A Revolution™ makes a world of difference

Revolution™
Hybrid H

- **9,000 lbs**
total weight

- **55,000 lbs**
concentrated load rating in 4 ft

Fontaine Revolution® Hybrid

- Pound for pound, the patent pending Revolution Hybrid is the **LIGHTEST, STRONGEST** combo trailer on the planet
- Less trailer weight means bigger **PAYLOAD** opportunity
- Weight reduction and improved aerodynamics deliver better **FUEL ECONOMY**
- Made possible by proven **TECHNOLOGY** from the aerospace industry
- It's a trailer **REVOLUTION!**

FONTAINE®
TRAILER

Revolution™ Hybrid H

It's not a trailer, it's a revolution... the Fontaine Revolution® Hybrid

- The first significant design improvement since the dawn of the combo trailer—pound for pound, the lightest, strongest combo trailer on planet earth
- Steel main beams combine with an extruded aluminum floor to give you maximum support at a lower overall weight
- Unitized construction for greater strength, durability and stability under load
- Friction-stir welding, proven technology from the aerospace industry, for superior structural integrity
- Patent pending siderails are stronger and lighter—Single extrusion routed design resists impact damage better than steel!
- Integrated securement system makes loading and unloading faster and easier—Just slide the modular chain tie-downs into position to safely secure your load
- Exclusive LED lighting package reduces the number of electrical connections by more than 60% for unequalled reliability—Backed by a comprehensive 10-year electrical system warranty!
- Sleek, aerodynamic shape cuts through the air with improved wind resistance
- See all of the advantages of this bold, new design at www.fontainetrailer.com and join the Revolution... only from Fontaine!

The trailer floor features an integrated load securement system to improve safety and convenience. The patent pending design is made possible by 3D solid modeling, FEA and friction-stir welding technology. The genius of the system is its simplicity. Modular chain tie-downs slide in grooves that are built into the floor. You can position the tie-downs virtually anywhere on the deck to secure your loads faster and easier with improved safety.

Specifications:

- Length: 48'
- Width: 102"
- Loaded fifth wheel height: 49"
- Weight: 9,000 lbs ± 3%
- Concentrated load rating: 55,000 lbs in 4 ft (80,000 lb main beam. GAWR and tire ratings determine payload)
